CLASSIFICATIONS BY INDUSTRIES FOR THE CENSUS OF MANUFACTURES, 1909.

There are 342 classifications used in connection with the census of manufactures of 1909, and each accepted report will be assigned to one of these classifications.

The classification of reports for manufacturing establishments is the assignment of the individual schedule to the particular class to which it belongs, in order to bring together, so far as practicable, all the establishments engaged in the same or kindred industry.

As a general rule the classification will be determined in accordance with the product of chief value. There may be exceptions to the general rule, which, however, probably will be associated with some industry for which a supplemental schedule is provided and be due to the character of the machinery or the kind and quantity of materials used.
